

Intro to

Data Analysis & Visualization in R

March 12th

12:00-1:00 PM

Come on in, the R is fine! R is a free, open-source language for data visualization and analysis. It is powerful and widely used in academic research and data-focused industry careers. In this workshop, we will take a quick dive into how R works, featuring some fun data visualization and exploration. This workshop does not assume any prior R knowledge — it is meant as a friendly, quick introduction to R. We will also discuss upcoming opportunities on campus to learn more.

Facilitated by Dr. Jeffrey Bye, Department of Psychology
